

Active floorstanding speaker DIGITS SIX POWER

wilson

POWERFUL SOLUTION THAT WILL SURPRIZE YOU

Six Power is a floor-standing speaker designed for enthusiasts who want powerful, low-frequency bass without the need for an external subwoofer or when one is not available.

IDEAL FOR STEREO OR HOME THEATER SYSTEMS

These speakers are ideal for stereo systems, but they are also perfect as front speakers in home theater systems. In the latter case, the possibility of low frequency support will be appreciated by every action movie lover.

VERSATILE SPEAKER USAGE

Wilson Six Power speakers can be used as classic passive speakers, for example, to play diverse musical repertoire. In this case, the additional bass gain must be turned off.

DISCREET ON THE OUTSIDE, POWERFUL ON THE INSIDE

Visually, these loudspeakers retain a classic and discreet form that matches most rooms, without betraying at first glance what is inside them.

EASILY FIT TO THE ROOM FURNITURE

Columns, thanks to their relatively small size, toned down colors of housing finished with wood with imitation of a delicate grain of wood in Light Oak and Black, safely fit into the environment without imposing style of the remaining furniture in the room.

FREEDOM OF GRILL COLOR CHOICE

The grilles of Six Power loudspeakers are magnetically attached to the fronts, almost completely covering the front wall with acoustically neutral fabric in two colors and textures at the user's choice - black and grey for the Light Oak loudspeaker, standard black and the other one, black, but with a smooth and glossy structure.

Cabinet: Light Oak
Grille: Black or Grey (included)

POWERED BASS DRIVER WITH OWN POWER SUPPLY

Thanks to the possibility of connecting the power supply of built-in bass driver amplifier directly to the mains socket, there is no need to load the amplifier driving the speakers, which also affects the better reproduction of other frequency ranges, thanks to which the bass is more powerful and has unprecedented dynamics.

COMFORTABLE VOLUME CONTROL

The volume of the bass amplifier is controlled by precision stepped potentiometers that, in conjunction with the contoured knobs, allow the volume to be controlled in a comfortable and responsive manner, even without visual control of the volume scale.

COMFORTABLE AND RELIABLE WIRE CONNECTIONS

Speaker wire terminals are located at the back in the lower part of the housing in the recess of the high-quality socket, and the facing upwards screws are gold-plated to facilitate cable connections.

ILLUMINATED LOGO FOR SOME SPICE

An added flavor to the design of these speakers is the unique, discreet white illumination of the Wilson logo at the bottom of the speaker. This element adds character in a darkened room, not only confirming its readiness for action, but discreetly illuminating the immediate surroundings.

SPECIFICATIONS

Recommended amplifier	50 - 200 W
Frequency response (± 3 dB)	40-20.000 Hz
Sensitivity (2.83V / 1m)	90 dB
Impedance	4-8 ohms
Maximum SPL	110 dB
Tweeter	1" with soft dome
Low-midrange driver	1x 6½"
Low range driver	1x 6½"
Active low range drivers	2x 6½" long throw
Output power [THD @1%]	60 W RMS
Crossover frequency split [Hz]:	700 Hz / 2.500 Hz
Cabinet type	Vented Bass Reflex
Connection inputs	Gold-plated, Bi-Wiring
Volume:	Adjustable control
Mains voltage	100-240 V, 50/60 Hz AC
Finish colors	Light Oak, Black
Dimensions (H x W x D)	1000 x 195 x 310 mm
Weight	16.00 kg
