

Floorstanding speaker

DIGITS SIX

UNIVERSAL AND AFFORDABLE SPEAKER SOLUTION

Wilson Six floorstanding loudspeaker is a versatile solution for both audiophiles who play music on classic stereo sets, amplifiers connected with modern network file streamers, as well as a response to the growing interest in soundtrack support from TVs.

Often, two floorstanding speakers in the 2.0 setting are the preferred solution in smaller apartments to enjoy high-quality TV sound without the hassle of placing additional surround speakers.

CHOICE OF ATTRACTIVE UP-TO-DATE FINISHES

Wilson Six are available in two color finishes: a black cabinet with a satin black or light oak front; both with a characteristic delicate wood structure.

DYNAMIC COLOR OF THE SPEAKER FRONT

The dynamic and modern appearance is emphasized by the remarkable, silver colours of the membranes and the drives' surrounding fronts of the fastening ring with characteristic undercuts on the sides.

ACOUSTICALLY NEUTRAL GRILLES

The grilles are made of special plastic covered with an acoustically-inert material with an attractive and modern design and colour, which allow fairly large constructions to fit perfectly into the living room environment.

CHOICE OF FINISHES AND GRILLES

The classic black material was used in the black columns, while the columns with light oak finish offer a slightly more varied – light grey – colour of the grille. Along with the more expressive structure of the material itself, they are a stylistically attractive addition to the room; also appreciated by women.

Cabinet: Light Oak
Grille: Black

TRUSTED DESIGN OF THE DRIVERS

Cellulose membranes with a special internal structure, often found as a proven material of many much more expensive drivers, are a strong advantage of this speaker design with their high strength and low weight. The design you can trust. The membranes are mounted on rubber suspensions, allowing for high bass dynamics and extremely high performance.

HIGH QUALITY NEODYMIUM MAGNETS

Strong neodymium magnets – which are used in higher-end loudspeakers – have been embedded in the centre of the tweeter drive system. The entire mechanical system has been constructed with high precision.

As a guard against unwanted temperature increases, the engineers have foreseen an aluminium coil system.

FRONT FIRING BASS REFLEX FOR CLOSE TO WALL PLACEMENT

In this housing construction, the bass port has been placed at the front, which makes it possible to position the speakers closer to the wall, which will certainly be appreciated by owners of smaller listening rooms, where space is vital.

COMFORTABLE AND RELIABLE WIRE CONNECTIONS

Speaker wire terminals are located at the back in the lower part of the housing in the recess of the high-quality socket, and the facing upwards screws are gold-plated to facilitate cable connections.

NATURAL SOUND SPEAKERS

Regardless of the manner of their use, from Wilson Six speakers we can expect a very attractive natural sound, which is close to what the artists creating the music intended to convey with their creativity.

SPECIFICATIONS

Recommended amplifier	up to 130 W
Frequency response (± 3 dB)	45-20.000 Hz
Sensitivity (2.83V / 1m)	90 dB
Impedance	4-8 ohms
Maximum SPL	110 dB
Tweeter	1" with soft dome
Midrange driver	2x 6½"
Cabinet type	Bass-Reflex
Speaker terminals	Single
Dimensions (H x W x D)	1000 x 195 x 306 mm
Weight	12.20 kg
Finish colors	Light Oak, Black
