## RAPTOR 5

wilson

Wilson Raptor 5 speaker is a smaller version of the twin Raptor 7. It is part of the Raptor series and can be used as part of a home theater system or as standalone stereo speaker. However, only complete cinema systems can be the source of unforgettable experiences, emotions and great sound. The subdued design of the cabinet is a compromise between classic floorstanders and modern sets that are meant to draw attention to themselves by design. The high quality of workmanship is primarily the finish of the cabinet surface with wood grain and high gloss lacquered - front.

### SCANDINAVIAN DESIGN THAT FITS ANY INTERIOR

Simple, neat, Scandinavian design. Nice housing blocks and proportionate, unpretentious. Raptor 5 speaker will work well both in a classic, subdued interior and extravagant space matching the modern style of housing.

Sturdy enclosure with front firing Bass Reflex offers much higher efficiency in the low frequency range when needed.

High quality housing covered with aesthetic layer of modern vinyl, with a wood-like surface finished with a slight gloss on the entire surface of the side, top and back walls.

The material provides long-lasting resistance to colour change and unwanted effects of light, which is especially important for a white finish, when the columns are placed in very sunny rooms.

**Cabinet:** White with wood grain texture  
**Grille:** black

### ACOUSTIC PROPERTIES

A 1" tweeter with a textile dome and two 5" low-midrange drivers with cellulose diaphragms are responsible for sound reproduction. The front of the tweeter is surrounded by a short horn designed to improve the efficiency of the tweeter's operating conditions.

The Raptor 5 offers a maximum level of 108 dB (SPL). The drivers use aluminum coils, which at high volume levels, effectively protect the drivers from overheating. The lower bandwidth of the Raptor 5 set starts at around 50 Hz, but the speakers easily reproduce the highest frequencies of 20,000 Hz. With an impedance of 4-8 Ohms, the recommended amplifier power should be in the range of 25-125 Watts - this gives a wide range of possibilities for connecting practically any modern AV-amplifier.

### BALANCED AND RICH SOUND

The proper selection of the parameters of a home theater speaker, its positioning in the room and the quality of the sound determine the final sound of the entire system. Raptor 5 sets - as a front speaker, it plays one of the most important roles: its power and quality form a kind of reference point for the other speakers. If we expect a decisive and powerful sound - it is difficult to find a better proposal.

Thanks to the Raptor series loudspeakers, we can at any time move to the cinema room and participate in the dynamic action of any - even the most explosive action movie. The set also includes a manual for the speaker - it will facilitate proper assembly and installation in the audio system.

According to the experts' evaluations, the speakers have well-developed processing characteristics: in the wide mid-high range, with slightly raised bass. Sound: balanced and dynamic, with rich bass response, powerful vocals, smooth treble and an optimal dose of detail.

### SPECIFICATION

Recommended amplifier.	40-150 W
Frequency response ( $\pm 3$ dB)	50-20,000 Hz
Sensitivity (2.83V / 1m)	88 dB
Impedance	4-8 ohms
Maximum efficiency (SPL)	108 dB
Crossover division frequency	2400 Hz
Tweeter	1" (25mm) soft dome
Low-mid-range drivers	2x 5"
Cabinet type	Bass Reflex
Speaker terminals	single
Included accessories	spikes
Dimensions (H x W x D)	839 x 170 x 263 mm
Finish colors	Black EAN: 5903402873072 White EAN: 5903402873089
Weight	9.90 kg

Raptor series: 9 Max/9/7/5/3/1/Mini/Vocal/X
